School of Computing and Creative Technologies

Assessment Brief

Submission details

Module title:	Software Development Project
Module code:	UFCFFF-30-3
Module Leader:	Steve Battle
Assessment title:	Project presentation
Year:	2026-27
Assessment type:	Presentation
Assessment weighting:	50% of total module mark
Size or length of assessment:	20-minute video presentation
Module learning outcomes assessed by this task:	**MO3** Communicate the artefact developed and the process by which it was produced. **MO4** Demonstrate the artefact developed and discuss its design, attributes and shortcomings.
Use of AI in assessment:	**Generative Artificial intelligence (Gen AI) tools can be used in an assistive role** You are permitted to use Gen AI tools in an assistive role in this assessment to support you with • drafting and structuring content • supporting a particular process such as translating content • providing ideas or inspiration to help you overcome a creative block. While GenAI tools might suggest topics/content, you will always need to go back and locate and critically engage with actual literature/research/evidence yourself. As the use of Gen AI is optional (due to its purely supportive capacity) its use is not part of the skills or knowledge you need to demonstrate for this assessment. However, if you have used Gen AI to prepare or produce part or all your work, you must acknowledge its use. For more advice on this (and its use in general) please see your Generative AI study skills guide.

Submission and feedback dates

Submission deadline:	Before 14:00 on May 13, 2027 Is eligible for 48-hour late submission window All times are 24-hour clock, current local time (at time of submission) in the UK.
Submission format:	Panopto video is recommended (see appendix).
Marks and Feedback due on:	10/06/27
Marks and Feedback will be provided via:	Summative feedback is provided after the submission due date.

Completing your assessment

What am I required to do on this assessment?
This individual assignment is a 20-minute **video** presentation, submitted via Blackboard, accompanied by a poster suitable for the degree show. Please make sure you show your face in the video.

The objectives of the demonstration are to communicate the nature of the artefacts you developed and the development process. You should demonstrate your design, describing its attributes and shortcomings. Please ensure you demonstrate usage by referring to use-cases and user scenarios. We're not looking for detailed code walkthroughs as they don't come across well on video.

You will use and submit a 'poster' suitable for the **degree show**. This should be suitable for a general audience, so it should not be overly technical. This should be a single (non-animated gif, jpeg, or png) image up to 1280 pixels by 1920 pixels, landscape or portrait. This should be accompanied by a short abstract for the same general audience. There is a permission form to complete (See 'Permission form GDPR 2020'), and although your marks do not depend upon providing permission to show your poster and text, we'd really love to show off your work.

No need for slides:

- Present a '**poster**' suitable for a virtual degree show. The image should have a maximum size of 1280 x 1920 pixels (landscape or portrait). Recommended formats are JPG, GIF or PNG.
- Give us a live demo of your software.
- Links to your source code repository, ensuring that it is accessible to your markers.
- A completed **permission** form to use the poster and abstract in our Virtual Degree Show (see 'GDPR Permission form), including a short abstract to accompany your poster.
  Your marks do not depend upon providing permission

If you have any questions about this assignment, please contact the module leader.

Where should I start?
We recommend completing your project report first.

What do I need to do to pass?
Demonstrate your software artefact (a live demo is best), and please ensure we see your face in the video. The pass mark is 40%.

How do I achieve high marks in this assessment?
You should demonstrate your working software in a well-crafted and flowing presentation. Explain your system from the user perspective, working from your use-cases and scenarios that relate to user needs. You should reflect on the development of the artefact and the process by which it was produced. We're looking for an excellent poster, great graphics with legible text, with an Interesting accompanying explanation, suitable for a wider (non-academic) audience. Explain things in your own words, not those of a machine.

How does the learning and teaching relate to the assessment?
Guidance on IT project management is covered in a short lecture series at the start of the academic year covering topics such as project planning, agile methodology, and ethics for undergraduate projects.

What additional resources may help me complete this assessment?
You will find relevant references in Blackboard's Reading Lists.
UWE supports Panopto video capture, or you may use the video recording software of your choice. You can either download Panopto from Apps Anywhere or use the Panopto Capture tool in your browser. Additional information can be found in the appendices about how to record and submit a Panopto video.

What do I do if I am concerned about completing this assessment?
It is recommended that you review all the relevant materials on Blackboard. You can also speak to your module leader for advice and guidance. UWE Bristol offer a range of Assessment Support Options that you can explore through this link, and both Student Support Advisers and Wellbeing Support are available.
For further information, please see the Student study essentials.

How do I avoid an Assessment Offence on this module?
It is important to ensure that you have ethical approval for any primary research you do that involves others. Include evidence of approval in the appendices of your project report. Lack of ethical approval will be treated as an Assessment Offence. Avoid collusion and plagiarism – copying work from others or from the internet.

Marks and Feedback

Policy) is available from the Academic Integrity webpages and requires that you submit work that is entirely your own and reflects your own learning, so it is important to:

- Refer to peer reviewed primary sources, rather than using AI or secondary sources
- Avoid copying and pasting any work into this assessment, including your own previous assessments, work from other students or internet sources
- Develop your own style, arguments and wording, so avoid copying sources and changing individual words but keeping, essentially, the same sentences and/or structures from other sources
- Never give your work to others who may copy it
- If an individual assessment, develop your own work and preparation, and do not allow anyone to make amends on your work (including proof-readers, who may highlight issues but not edit the work).

When submitting your work, you will be required to confirm that the work is your own, and text-matching software and other methods are routinely used to check submissions against other submissions to the university and internet sources. Details of what constitutes plagiarism and how to avoid it can be found on UWE's Study Skills pages about avoiding plagiarism.

Your assessment will be marked according to the marking criteria on the next page.
You can use these to evaluate your own work before you submit.

Marking Criteria

	< 40%	40% – 50%	50% - 60%	60% - 70%	≧ 70%
Criteria	**Needs Work**	**Pass**	**Good**	**Merit**	**Distinction**
Development process (40%) Relates to MO3	Poor/no exposition of use-cases.	Good research background with realistic use-cases. Requirements are supported by relevant background research and show a clear connection to the intended users and project goals.	Use-cases and user scenarios are clearly presented and demonstrate a sound understanding of user requirements. Evidence of planning and stakeholder needs is provided, but discussion of project monitoring, communication, and evaluation lacks the depth expected at higher grades.	Clear and realistic requirements, with evidence of solid background research. Good use-cases identify user value, supported by user scenarios. A comprehensive account of the goals, constraints, workflow management, strategies, tasks and deliverables of the project.	Explain how you'll measure the project to determine if it's successful or not. List what you assume is true and what you've proven true in terms of what can impact the project. Rigorous client analysis, with a well-defined communication plan. Details how project work will be monitored and reported, including how often and to whom.
Demo (50%) Relates to MO4	Implementation not available for inspection.	Weak on design. Implementation not fully working.	The artefact is functional and demonstrates implementation of the core requirements. Evidence of a structured development process, testing, and refinement is presented.	Good narrative based on documented user scenarios that relate to documented use-cases and user needs. Real-world deployment.	Well-crafted demo that flows well. Reflective communication of the artefact developed and the process by which it was produced. Deployed with evidence of a user-base.
Poster (10%) Relates to MO4	Poster not available.	Poster is complete but has issues with legibility.	The poster is clear, legible, and professionally presented, communicating the project's aims, development, and outcomes effectively, although it may lack visual impact.	The poster is creatively used in the presentation to elucidate the underlying ideas making it meaningful to other students and academics.	Excellent poster, great graphics with legible text. Interesting accompanying explanation, suitable for a wider (non-academic) audience.

Appendices

Video Capture

UWE supports Panopto video capture, or you may use the video recording software of your choice. You can either download Panopto from Apps Anywhere or use the Panopto Capture tool in your browser.

It's important to remember that uploading a video is not the end of the submission process, you must still submit the video following the submission process below. Further guidance on installing and using Panopto, and instructions on submitting a video may be found below:

- **Installing and using Panopto**
  https://info.uwe.ac.uk/online/blackboard/students/guides/panopto
- **Submitting Panopto videos**
  https://info.uwe.ac.uk/online/blackboard/students/guides/assignments/view-submit.asp

Uploading a file to the 'My folder' area *does not constitute submission*. *Submissions must be made using the* ***Panopto Video Student Video submission*** *option from the add Content (+) button and Content Market, within the text editor*. Using the Panopto Video option will result in **no** recording being added to the submission.

Submitting a Panopto file for an assignment

1. From either the Coursework area or the appropriate folder in the course, click on the assignment name.
2. Click on **View Instructions** and you will be taken to the submission page.
3. Review any instructions provided including any files provided. Scroll down to the Submission area at bottom of the page.
4. From the text editor toolbar select the **+** icon. You may need to click on the ellipsis (...) in the text editor to see it.
5. Select **Content Market** from the drop-down menu
6. Select **Panopto Student Submission** from the list.
7. You will be taken to the Panopto Student Submission screen. Expand the drop down and select **My Folder**.
8. Your **My folder** area will display any media that you have saved there.
9. Select the radio button to the left of the recording that you want to attach to your submission and then select **Insert**.
10. You will see a confirmation box, where you can change the Display name if you wish, click **Insert**.
11. You will be taken back to the upload assignment screen and will see your Panopto file in the text editor.
12. If you need to attach any other files to your submission, use the paperclip icon on the toolbar and use the browse options to find and select the file, or just drag and drop the files into the Text editor.
13. Select **Submit**.

- You may receive "WARNING - You have not attached any files to this submission" This is OK as you have made a text submission with a video link only.
- It's good practice to try a short test recording in advance of the submission date.

Uploading recordings to the cloud

You can also upload videos (e.g. mp4) recorded with other software.

- **Uploading recordings to the cloud**
  https://info.uwe.ac.uk/online/blackboard/students/guides/panopto/uploading.asp

1. Log into the Panopto cloud via https://uwe.cloud.panopto.eu/
2. Click **Create**
3. Click **Upload media**
4. Select a folder to upload the recording into
5. Add the required file by dragging it into the box or by clicking the box, selecting and clicking open
6. Click **x** once the upload is complete

- This cloud upload is not a submission until you've followed the steps to submit the video, above.
- Don’t leave upload until the last minute as file size and network speed may affect upload times.
